Comment on Written Opinion of the International  
Searching Authority

In the Written Opinion of International Searching Authority dated April 05, 2005, all of the originally filed claims 1-18 are indicated as being not to involve an inventive step over JP11-296327 (D1), JP5-327748 (D2) and JP2003-308194 (D3).

In D1, a print document is encrypted by a random number as a session, and the random number is encrypted by the public key of the user who is an "intended receiver".

In D2, in case of performing encryption broadcast communication, it aims to shorten the delivery time for delivering a session key to a large number of broadcast transmission destinations and to simplify the management of a master key. More specifically, the portion of D2 indicated by the Written Opinion of International Searching Authority describes that the encryption key data is generated based on a "password", and the session key is encrypted by the encryption key.

In D3, in case of performing secured printing that a password is added to print data, the password portion in the print data is encrypted and embedded in a print job. More specifically, the password is encrypted by the unique data received from the print

server, and, in the relevant process of encrypting the password, a digest algorithm such as MD5 (Message Digest 5) or the like is used.

Incidentally, in both D1 and D2, since a public key encryption system is used, it is necessary on the data reception side to provide an IC card to be used to decrypt the encrypted data (that is, a user's private key is stored in the IC card). In the meantime, according to the invention as recited in the originally filed claims 1-18, since the user only has to remember the own personal identification code, the public key encryption system is not used. For this reason, in the invention, since any IC card is not used, it is unnecessary to provide an IC card reader or the like in the printer. That is, such a significant structure of the invention by which any IC card may not be used cannot be derived from D1 and D1.

Then, even if D3 which does not encrypts the print data is appropriately combined with D1 and D2, the present invention cannot be attained from such combinations.

As a result, it is believed that the inventive step of the invention as recited in the originally filed claims 1-18 cannot be denied by D1, D2, D3 and any appropriate combination thereof.
